CISCO SECURE WORKLOAD CAN DO A LOT IN YOUR NETWORK

But what SHOULD you be using it for?

BTA can show you with a Mentored Proof-of-Value engagement

WHAT IS A MENTORED POV?

BTA's M-PoV will bring Cisco Secure Workload (CSW) expertise to your team, highlighting its key value propositions. This isn't just a scripted demonstration; it's an interactive session customized to your specific use cases.
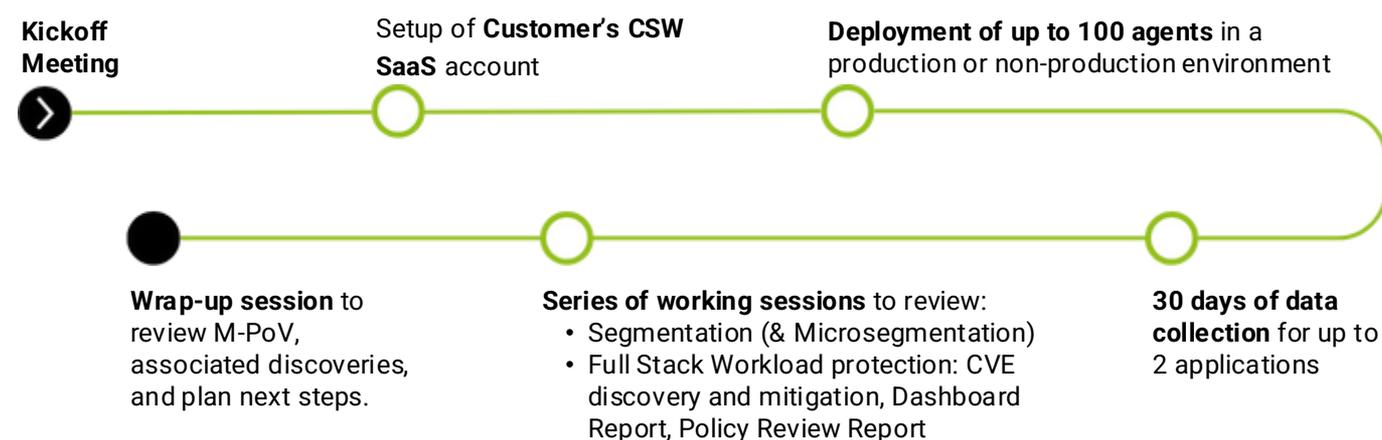

With BTA, you benefit from both practitioner and instructor expertise, ensuring that your team not only explores the system but also gains valuable insights into its advantages.

HOW DOES THIS WORK?

BTA will deploy CSW SaaS agents with your team. After 30 days of data collection, BTA's CSW experts will meet with your team and examine the analyses CSW provides - application flows, server vulnerabilities, and more – from the standpoint of your needs and use cases.

We'll show you how things work, and how CSW can help you effectively secure your internal systems.

MENTORED POV PROCESS

Kickoff Meeting

Setup of **Customer's CSW SaaS** account

Deployment of up to 100 agents in a production or non-production environment

Wrap-up session to review M-PoV, associated discoveries, and plan next steps.
