

Cisco Hyperfabric is the new, cloud-based data center management system. It provides high-speed data center connectivity, combined with a cloud controller that leverages Cisco's decades of networking experience. BTA has helped Cisco with Hyperfabric development, and our experience will ensure that you fully realize its full range of advantages.

WHAT IS THE STARTER PACK SERVICE?

BTA's **Starter Pack Service** is designed to bring up your Hyperfabric data center quickly and securely.

HOW DOES THIS WORK?

The Starter Pack starts with a Planning & Design Session, where BTA's Hyperfabric expert will meet remotely with your technical team. We'll discuss your objectives and goals for your new Hyperfabric data center, as well as technical capabilities to help your team operate and manage Hyperfabric efficiently.

The focus is on getting the details needed for you to start getting the most from Hyperfabric on Day One.

After the Planning & Design Session, we'll introduce the tremendous power of Hyperfabric's cloud-based automation capabilities. We'll build a Fabric Design Template that documents the details we discussed in the Planning & Design Session. We'll review and validate the data and decisions from the Planning & Design Session, and make any needed adjustments.

When the equipment arrives BTA will work with you to configure connectivity to the cloud controller, claim & bind your switches, and apply the configurations we validated in the Template. We'll mentor your team through each type of feature (VRF, port config, etc.), and also showcase automation by leveraging BTA's Architect Explorer™ software.

We'll be mentoring your team, and also providing Knowledge Transfer, to ensure you're prepared for production Day One.

STARTER PACK DELIVERABLES

	Small	Medium	Large
Leaf Switches	4	12	32
License Tier	Essentials	Advantage	Premier
Routing Peers	2	6	12
VRFs	2	4	8
VLANs	8	20	100
Migrations	No	Yes	Yes
Training	mentoring	mentoring	ILT class

WHY BTA?

Our deep experience in building and operating data center and cloud networks is the foundation of every BTA mentoring engagement.

We've been deploying and teaching Hyperfabric since before it shipped, and bring the hands-on expertise your team needs.
