

Nexus Dashboard Mentored Proof-of-Value (M-PoV)

Cisco Nexus Dashboard is the premier Day 0 to Day 2 data center management platform. You may have seen demos – how does it work in your environment?

BTA can show you with a Mentored Proof-of-Value engagement.

JUST WHAT IS A MENTORED POV?

BTA's M-PoV will bring Nexus Dashboard (ND) expertise to your team, to showcase the key value propositions. But this isn't a rote, canned demonstration. This is a live engagement that tailors the deliverables to your particular use cases. And BTA brings both practitioner and instructor expertise, to ensure that your team learns about the system while testing out its benefits.

HOW IS BTA'S TRAINING DELIVERED?

BTA will deploy a Nexus Dashboard controller with you & your team. We'll onboard lab switches and easily build out a fabric with ND's Fabric Controller features. With ND's Insights, we'll collect telemetry, and demonstrate enhanced capabilities like firmware updates, bug scrubs, and application troubleshooting. We'll show you how things work, and how ND can help you effectively operate your internal systems.

WHY BTA?

BTA has been deploying and teaching Nexus Dashboard for years. We have the hands-on experience you need.

MENTORED POV PROCESS

- Kickoff meeting with customer & partner account team
- Setup of Nexus Dashboard cluster
- Onboarding of lab switches and fabric buildout
- Series of working sessions to review:
 - Visibility
 - Analytics– AI Ops-driven reporting, PSIRTs, advisories, etc.
 - Troubleshooting – Traffic Analytics, Connectivity Analysis, anomaly resolution, etc.
 - Compliance – Lifecycle, scalability limits, guided & smart firmware updates
- Wrap-up session to review M-PoV, associated discoveries, and plan next steps.

Call BTA for your Mentored PoV today.
